Architecture.md — Compliance Coverage Agent

```
1 # Architecture.md - Compliance Coverage Agent
2
3 ## 1. Overview
4
5 The Compliance Coverage Agent ingests two regulatory corpora - GDPR and the EU AI Act - as vector-searchable clause stores, and given an incoming user story / requirement, returns the ranked list of regulatory clauses that story touches (e.g. "User can request full deletion of their account and data" -> GDPR Art. 17, GDPR Art. 5(1)(e)).
6
7 The system is built API-first: every capability is exposed as a versioned REST endpoint on the Node.js backend, built and validated (via curl/Postman/integration tests) before any React screen is wired to it. The frontend is a thin client over these APIs - it has no business logic of its own.
8
9 The six functional capabilities are implemented, exposed, and consumed in this fixed order, which also defines the sidebar menu order in the UI:
10
11 1. Scrape GDPR -> data/gdpr_clauses_langchain.json
12 2. Scrape EU AI Act -> data/eu_ai_act_clauses_langchain.json
13 3. Ingest GDPR clauses -> MongoDB Atlas (vectorized)
14 4. Ingest EU AI Act clauses -> MongoDB Atlas (vectorized)
15 5. Retrieve GDPR matches for a user story
16 6. Retrieve EU AI Act matches for a user story
17
18 ---
19
20 ## 2. Tech Stack
21
22 | Layer | Technology | Notes |
23 |---|---|---|
24 | Frontend | React.js + TypeScript | SPA, consumes backend REST API only |
25 | Backend | Node.js (Express) | REST API server, API-first design |
26 | Orchestration framework | LangChain (JS) | Document loading, splitting, embedding orchestration, retriever composition |
27 | Web scraping | CheerioWebBaseLoader | @langchain/community/document_loaders/web/
```

Chat Claude Code

Create implementation plan for web scrapi...

Create a postman collection separately

OUT {
 "story": "User can request full deletion of their account and data",
 "matches": [
 ...
]
}

• Works correctly with the `topk / rerankTopk` overrides too.

Postman collection created: [postman/Compliance-Coverage-Agent.postman_collection.json](#)

• Postman Collection v2.1 format — import directly via Postman's "Import" button

• Collection variable `base_url` (default `http://localhost:4000/api/v1`) — edit once to point at any environment

• 7 requests in spec order: Health Check, then the 6 numbered endpoints (Scrape GDPR/EU AI Act, Ingest GDPR/EU AI Act, Retrieve GDPR/EU AI Act), each with a working example body and a description pulled from the API contract

• Verified the JSON parses correctly and sanity-tested the retrieve request body (including the optional `topk / rerankTopk` overrides) against the live backend — real results returned

Create implementation plan for web scrapi...

Approved, Proceed with Phase 7

`localhost:3000` -> `localhost:4000`

• Backend `/health` still green

This completes all 7 phases of the implementation plan. Both servers are running in the background right now:

• Backend: `http://localhost:4000` (task `bigcnclm`)

• Frontend: `http://localhost:3000` (task `blohe6hez`)

Since I can't drive a browser myself, could you open <http://localhost:3000> and do a quick pass — click through the 6 sidebar pages, run the GDPR scrape/ingest (safe to re-run, both are idempotent), and try a retrieval search on page 5 or 6? That's the one verification step I genuinely can't do for you.

One housekeeping note: `!mdata.txt` still sits in the project root with live credentials — worth deleting or moving somewhere private once you're done referencing it, since it was never meant to be checked into version control.

Create a postman collection separately
