Visual QA Comparison Tool API

You1502:32 PM, August 18, 2026

REST API for the Visual QA Comparison Tool (Architecture.md ss8). Covers health, dynamic config, image uploads, and both run types (New Feature/Page and Regression) end to end. Requests are ordered so running the collection top-to-bottom (e.g. via Postman's Collection Runner) exercises a full workflow: upload -> create run -> list -> get -> download report -> delete.

Set `baseUri` to match `API_BASE_PATH` from your `.env` (default assumes `PORT=4000`, `API_BASE_PATH=/api/v1`). Requests that create resources auto-populate the `imageFileId` / `baselineImageFileId` / `currentImageFileId` / `runId` / `regressionRunId` collection variables from their responses via a post-response script, so downstream requests need no manual editing.
