Before & After Comparison

BEFORE (with abbreviations)

AFTER (expanded)

share diagnostic reports with patients via whatsapp

share diagnostic reports with patients via whatsapp

How Query Preprocessing Works

1. Normalization: Converts text to lowercase, removes special characters, extracts text case (tz)

2. Abbreviation Expansion: Expands healthcare abbreviations (UHD → unique health id, OTP → one time password)

3. Synonym Expansion: Generates multiple query variations using synonyms (patient → customer/user/individual)

4. Search Expansion: Uses all variations to perform comprehensive search with better recall

Prompt & Schema

Prompt Template & JSON Schema Manager

Configure and test AI prompt templates and JSON schemas for healthcare test cases

ICEPOT Framework Enabled: This manager now uses the ICEPOT methodology for structured prompt engineering: Instruction, Context, Examples, Persona, Output, Time

JSON SCHEMA

PROMPT TEMPLATE

TEST & PREVIEW

METRICS EVALUATION

JSON Schema Configuration

```
{  "schema": "http://json-schema.org/draft-07/schema#",  "title": "Healthcare Test Case",  "type": "object",  "properties": {    "testCaseId": {      "type": "string",      "description": "Unique identifier for the test case, e.g., TC_001"    },    "module": {      "type": "string",      "description": "Functional module name, e.g., Patient Registration"    },    "testCaseTitle": {      "type": "string",      "description": "Concise title describing what is being tested"    },    "testCaseDescription": {      "type": "string",      "description": "Detailed narrative explaining the purpose and flow of the test"    },    "testSteps": {      "type": "array",      "description": "Step-by-step instructions for executing the test",      "items": {}    }  }
```

This schema defines the structure of healthcare test cases stored in MongoDB. Required fields: testCaseId, testCaseTitle, testSteps, expectedResults.

METRICS EVALUATION

JSON Schema Configuration

```
{    "relatedUserStories": {      "type": "array",      "description": "IDs of related user stories in the user story collection",      "items": {        "type": "string"      }    },    "metadata": {      "type": "object",      "description": "Additional tags for hybrid search filtering",      "properties": {        "module": { "type": "string" },        "priority": { "type": "string" },        "environment": { "type": "string" },        "automationStatus": { "type": "boolean" }      }    },    "required": [      "testCaseId",      "testCaseTitle",      "testSteps",      "expectedResults"    ]  }
```

This schema defines the structure of healthcare test cases stored in MongoDB. Required fields: testCaseId, testCaseTitle, testSteps, expectedResults.
