

Context

Act as a Senior Developer create strictly HTML page for testcase generator with customized UI not embedding/Without Langflow chat CDN

Instructions

1) Strictly DO NOT use the below langflow CDN for chat

```
<script src="https://cdn.jsdelivr.net/gh/langflow-ai/langflow-embedded-chat@main/dist/build/static/js/bundle.min.js"></script>
```

2) Mandatorily Chat UI should be Custom One calling the Langflow API

3) UI should have sample user stories for Agriculture, E-com, Medical.

4) Position the chat interface in a user firendly manner, ensuring it is easily accessible and visually appealing.

5) Strictly Implement Export options for the generated testcase from the chat window in proper excel format and should have the below format

Each test case MUST include:

- * Test Case ID

- * Title

- * Preconditions

- * Steps (numbered, clear, atomic)

- * Expected Result

6) UI should be a Description about the Testcase Generator

7) Chat window should be responsive and should work seamlessly across different devices and screen sizes.

8) Strictly Enure that toggle option is implemented on the top right corner of the page

Dark (Moon icon) and light(Sun icon) theme in the UI

9) Give a option with copy to clipboard

10)Strictly follow this Instructions :

No extra text.

No headings.

No explanations.

No assumptions.

11) Chat bot name should be "ROBOT"

- 12) Welcome message should be "Happy to help you in Testcase generation"
- 13) Error message should be in red
- 14) when we click on empty chat without enter any replies, it should give a error message as "No input given"
- 15) Once TC is generated it should provide a success message "Testcases are generated successfully"
- 16) once the file is downloaded it should provide a success message "Excel downloaded Successfully"
- 17) Clearly strict with the example testcase format

Example (Reference Format Only)**

Test Case ID: TC_AGR_001

Title: Verify successful crop registration with valid details

Preconditions: Farmer is logged into the Agriculture Portal

Steps:

1. Navigate to Crop Registration.
2. Select farm location.
3. Enter crop details with valid values.
4. Submit the registration.

Expected Result:

1. Landed on the registration page
2. Farm location is selected successfully
3. valid values are entered successfully, crop details entered successfully
4. Registration completed successfully

(Do NOT reuse this example in output unless explicitly applicable.)

18) use the below API --API Baseurl,flowid,API key and model should be configurable in the script file no hardcoding in the HTML

HTTP Method -Post

Endpoint -http://localhost:7860/api/v1/run/80f213ad-291d-4aa2-a84c-a09c175feedc

BaseUrl-http://localhost:7860/api/v1/run

Flow ID-80f213ad-291d-4aa2-a84c-a09c175feedc

API Key-sk-eKOsD__BbpbHODyYDnHONGPXYEIooPL_Tgd5Loda_8c

19) Mandatorily it should have 5 positive and 5 negative testcases, total is 10 cases for must
