

analyse the files inside the folder "TCGenerator + Review agent" and go with the instruction on the "TCgenertorwithreviewagent.md" file and analyse other Json files and perform a HTML implementation

1. Give me a 5 steps of implementation plan
2. Proceed step by steps
3. get approval from me for every steps
4. after proceeded the steps, give me the descriptions what is implemeted
5. Finally give a Green success message once implement is done

=====

Context

Act as a Senior Developer. Create a single responsive HTML application with a completely custom UI that includes both:

1. Test Case Generator
2. User Story Reviewer

Strictly do NOT use Langflow Embedded Chat CDN or any embedded chat component. The application must communicate directly with the Langflow API using HTTP requests.

Instructions

1. Strictly DO NOT use the below Langflow Embedded Chat CDN:

```
```html
```

```
<script src="https://cdn.jsdelivr.net/gh/langflow-ai/langflow-embedded-chat@main/dist/build/static/js/bundle.min.js"></script>
```

```
```
```

2. Create a completely custom UI. Do not embed Langflow chat. Use your own HTML, CSS and JavaScript to call the Langflow APIs.

3. The application must contain two independent modules:

- * Test Case Generator

- * User Story Reviewer

4. The entire application must be fully responsive and work seamlessly across desktop, tablet and mobile devices.

5. Implement a Dark/Light Theme Toggle at the top-right corner.

- * Dark Theme → Moon Icon

- * Light Theme → Sun Icon

6. Use a modern, clean and professional UI.

7. API configuration must NOT be hardcoded inside HTML.

Store all configurable values inside the JavaScript file:

- * Base URL

- * Flow ID

- * API Key

- * Model Name

8. Display all API errors in RED color.

9. The application must have proper success and error notifications.

10. Do not provide any unnecessary text, explanations or assumptions inside the generated output.

11. The UI should be visually appealing, easy to use and user friendly.

12. Maintain consistent styling across both modules.

MODULE 1 — TEST CASE GENERATOR

13. Display a description explaining what the Test Case Generator does.

14. Show sample User Stories for the following domains:

- * Agriculture
- * E-Commerce
- * Medical

15. The chatbot name must be:

ROBOT

16. Default welcome message:

"Happy to help you in Testcase generation"

17. Implement a fully custom chatbot UI.

18. Position the chat interface in a user-friendly and easily accessible location.

19. If the user clicks Send without entering any input, display the error message in RED:

"No input given"

20. Generate test cases only after successful API response.

21. After successful generation display:

"Testcases are generated successfully"

22. Implement Copy to Clipboard functionality.

23. Implement Export to Excel.

24. After successful Excel download display:

"Excel downloaded Successfully"

25. Excel must be properly formatted.

26. Every generated Test Case MUST contain:

- * Test Case ID
- * Title
- * Preconditions
- * Steps
- * Expected Result

27. Steps must be:

- * Numbered
- * Clear
- * Atomic

28. Expected Results must correspond to every step.

29. Every generation MUST contain exactly:

- * 5 Positive Test Cases
- * 5 Negative Test Cases

30. Total generated Test Cases must always be:

10

31. Strictly maintain the following format:

Test Case ID: TC_XXX

Title:

Preconditions:

Steps:

- 1.
- 2.
- 3.
- 4.

Expected Result:

- 1.
- 2.
- 3.
- 4.

32. Do NOT reuse the sample reference unless applicable.

33. Test Case Generator Langflow Configuration

HTTP Method:

POST

Base URL:

<http://localhost:7860/api/v1/run>

Flow ID:

80f213ad-291d-4aa2-a84c-a09c175feedc

Endpoint:

http://localhost:7860/api/v1/run/80f213ad-291d-4aa2-a84c-a09c175feedc

API Key:

sk-eKOsD__BbpbHOdyYDnHONGPXYEloOPL_Tgd5Loda_8c

MODULE 2 — USER STORY REVIEWER

34. Display a description explaining what the User Story Reviewer does.

35. Welcome message:

"User story review model"

36. Chat interface is NOT required.

37. Fetch User Stories from Jira.

38. Display all fetched User Stories in a clean expandable list.

39. Each User Story should display:

- * User Story Number

- * Summary

- * Description

- * Acceptance Criteria

- * Any additional Jira information returned by the API

40. Clicking a User Story number must expand/collapse the complete details.

41. Review every User Story using the Langflow Review API.

42. Display review scores for every User Story.

43. Display an overall review score for all User Stories combined.

44. Provide graphical representation for every User Story review.

45. Provide an overall graphical representation for all reviewed User Stories.

46. Graphs should be:

- * Easy to understand

- * Color coded

- * Responsive

47. If any review score is low, display a RED indicator.

48. Display score categories clearly.

49. User Story Reviewer Langflow Configuration

HTTP Method:

POST

Base URL:

<http://localhost:7860/api/v1/run>

Flow ID:

b925019f-b319-43cc-b16f-b1313838d865

Endpoint:

http://localhost:7860/api/v1/run/b925019f-b319-43cc-b16f-b1313838d865

API Key:

sk-eKOsd__BbpbHOdyYDnHONGPXYEloOPL_Tgd5Loda_8c

GENERAL REQUIREMENTS

- 50. Use only HTML, CSS and JavaScript.
- 51. Do not use Langflow Embedded Chat.
- 52. All Langflow communication must happen through direct API calls.
- 53. Keep API configuration centralized inside the JavaScript file.
- 54. Use modular code with proper separation of HTML, CSS and JavaScript.
- 55. Ensure accessibility and responsive design throughout the application.
- 56. Follow clean coding standards with reusable components.
- 57. Maintain consistent UI/UX across both modules.
- 58. All user interactions should provide appropriate visual feedback.

59. All success messages should appear in a success style.

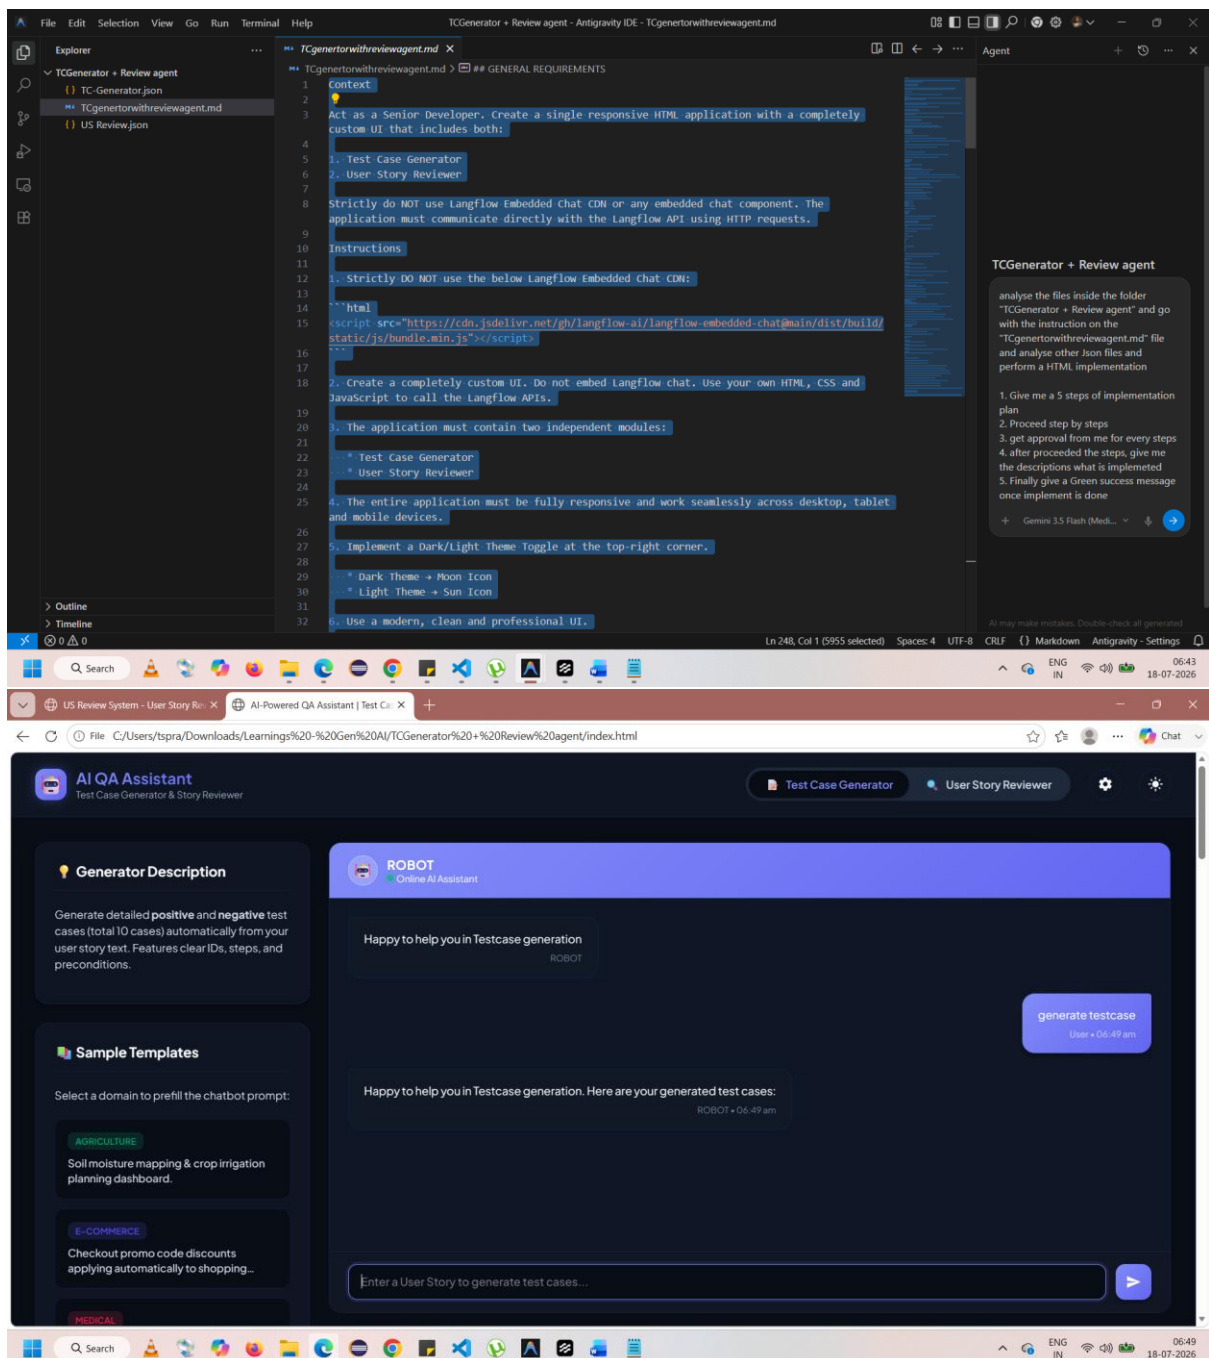

60. All error messages should appear in a red error style.

61. The final application should function as a complete AI-powered QA Assistant consisting of:

- * Test Case Generator

- * User Story Reviewer

Both modules should coexist within a single responsive HTML application while sharing the same design language, theme toggle, layout, notification system and overall user experience.

Test Case ID: TC_001

Title: Verify successful initialization of As a shopper, I want to apply discount coupon code...

Preconditions: User is logged into the system and navigating to the relevant module.

Steps:

1. Navigate to the dashboard.

2. Verify the default display load states.
3. Verify that the main elements match design specifications.

Expected Result:

1. Page loads successfully.
2. Default screens are correct.
3. All components are visible and interactive.

Test Case ID: TC_002

Title: Verify full form validation with valid entries

Preconditions: All configuration variables are correct.

Steps:

1. Input valid details into the fields.
2. Click the submit/action button.

Expected Result:

1. Input is validated without warnings.
2. Transaction completes successfully with confirmation message.

Test Case ID: TC_003

Title: Verify responsive UI layout transitions

Preconditions: User opens the system on multiple devices.

Steps:

1. Resize the browser window to mobile width.
2. Open navigation controls.

Expected Result:

1. Layout adjusts seamlessly without overlapping text.
2. Menus are properly aligned and touch targets are easy to tap.

Test Case ID: TC_004

Title: Verify light/dark theme toggle rendering

Preconditions: System has theme switcher control active.

Steps:

1. Click the theme toggle in the top-right corner.
2. Check background contrast and button readable colors.

Expected Result:

1. Theme switches instantly with correct sun/moon icons.
2. Text remains fully legible with appropriate contrast levels.

Test Case ID: TC_005

Title: Verify quick select auto-fill behaviors

Preconditions: Quick template select cards are active.

Steps:

1. Click on a sample domain template.
2. Verify text insertion.

Expected Result:

1. Text template auto-fills the main text input area.
2. Input character counter is updated correctly.

Test Case ID: TC_006

Title: Verify input rejection for empty values

Preconditions: Main text input is completely empty.

Steps:

1. Click Send/Submit button without writing any text.

Expected Result:

1. System prevents submission and shows red error notification: 'No input given'.

Test Case ID: TC_007

Title: Verify validation warning on extremely long strings

Preconditions: User inputs characters exceeding limits.

Steps:

1. Paste a 10,000 character string into the description input.
2. Click submit.

Expected Result:

1. Form indicates warning alert or successfully truncates inputs safely.

Test Case ID: TC_008

Title: Verify offline warning banner behavior

Preconditions: Device network connection is disabled.

Steps:

1. Disconnect internet connection.
2. Attempt to trigger API review submit.

Expected Result:

1. Error notification displays in red detailing offline/fallback status.

Test Case ID: TC_009

Title: Verify XSS injection protection validation

Preconditions: User has input permissions.

Steps:

1. Type script payload into the text area: `<script>alert('xss')</script>`.
2. Click submit.

Expected Result:

1. Script tags are escaped and rendered safely as raw text inputs.

Test Case ID: TC_010

Title: Verify server timeout grace recovery

Preconditions: Server is simulated to take longer than timeout duration.

Steps:

1. Trigger submit with artificial 30s timeout values.

Expected Result:

1. System displays progress spinner, then times out displaying a red API error message safely.

Implementing TC Generator Review App

Proceed with step5

TIP

SUCCESS: AI QA Assistant Implementation Completed Successfully!

All steps of the implementation plan have been completed, verified, and checked off in the task logs.

You can now access and run the complete AI QA Assistant application locally:

- Main Web Application: index.html
- Styles & Design System: style.css
- Central Configuration: config.js
- Async API Call Engine: api.js
- Tab & Interaction Logic: app.js

Open index.html in any web browser to see the complete application in action! You can view the final summary report in walkthrough.md.

Walkthrough

Detailed summary of the five steps completed to build the AI-powered QA Assistant (Test Case Generator and User Story Reviewer) HTML web application.

Evaluation Details

QUALITY DIMENSION MATRIX

Clarity
Unambiguous wording and clear descriptions14/20

Completeness
Acceptance Criteria & predefined conditions10/20

Business Value Alignment
Tangible values matching healthcare objectives12/20

Testability
Derived criteria for verification by QA11/20

Technical Feasibility
Realistic deployment checks & logic limits13/20

RECOMMENDATIONS & IMPROVEMENTS

- Simplify user story terminology to remove potential developer ambiguities.
- Add detailed pre-conditions and numbered acceptance criteria steps.
- Express business value clearly in the 'So that...' statement.
- Specify exact data ranges or field validations to improve testability.
- Review technical architecture constraints with developers to ensure feasibility.
